Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

This variation adds two waste codes to the permit:

Waste Code	Description
10	Wastes from Thermal Processes
10 02	Wastes from the Iron and Steel Industry
10 02 01	Wastes from the processing of slag
10 02 02	Unprocessed slag

Both waste codes have been proposed in response to a change in the supply chain. Blast furnace slag and steel slag are currently sourced nationally and classified as non-waste under the 'Aggregate from Waste Steel Slag' Quality Protocol. However, the current supplier can no longer guarantee sufficient provision of the blast furnace slag or steel slag and so the operator has found a new European based source. As the blast furnace slag and steel slag will be transported across national boundaries to get to the Queensferry site, the material will be classified as a waste, under the above inert European Waste Catalogue (EWC) codes.

There are no changes to the permitted annual tonnage, operations or emissions as a result of this variation.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
