

Non-Technical Summary

Site Location and Description

J Plant Ltd are applying for a Bespoke Environmental Permit for their facility at West Way Rd, Newport.

The site lies within an industrial area of Newport. The site will receive household, commercial and industrial waste. There is an existing waste facility within 500yds of the facility and many more waste facilities in the vicinity. There is also a active landfill site.

Proposed Activities

The facility will accept and process non-hazardous wastes from household, commercial and industrial waste producers. The facility will have a capacity of 35,000 tonnes per annum.

All recyclable materials will be recovered with the aid of mechanical plant.

Waste is manually and mechanically treated in line with the relevant legislation and published Natural Resources Wales and Government Guidance.

The site will be operated in accordance with an internal management system.

Personnel working at the site are appropriately trained to ensure effective operation of the site.

Risk Assessment

The risk assessment document has considered all potential risks from the site and identified mitigation measures for odour, noise and vibration and fugitive emissions will not have any significant impact on the environment.

Personnel working at the site are appropriately trained to ensure the effective operation of the site. A number of personnel on site have Certificate's of Technical Competence in the Treatment & Transfer of hazardous and non-hazardous waste.
