Dear sir/madam

I have been in contact with Mr. Phil Barrett, Environment officer with regards to my application for environment permit for a new water treatment plant installed at the address above. Before this we were on a shared septic tank with our next door neighbours known address as the Rockmonds. The reason for our new installation was due to the shared tank was failing due to the drainage field causing problems not draining due to being based on clay ground we had major issues with the failing tank and drainage so we put a new system in place of a water treatment which is more environmentally friendly and efficient.

We used a company called OMOI
(Mr, Gareth Woods.) for the Installation.

as we could no longer be on a Shared Septic
tank with the Rocklands, because the
tank in there garden has failed, made
worse by heavy Rainfall and was being
emptied every 3 weeks when weather was
bad which we had to share the costs
at the time for each time the tank
was emptied, being on clay and the
drainage field not able to cope with
both houses. so we decided that we
had to go on our own system which
is more up to date

also attached to this letter is a copy from
welsh water Drainage and water enquiry.

Many thanks.
