### **Introductory note**

#### **This introductory note does not form a part of the notice**

The following gives notice of a minor technical variation of an environmental permit.

This variation authorises the addition of a number of European Waste Catalogue (EWC) codes to the list of accepted waste types to the permit and also includes an amended site plan.

The principle EWC code additions apply to the transfer facility where waste is accepted, repacked, bulked and transferred for final disposal or recovery. The additional permitted waste types will expand the waste acceptance capability of the transfer facility.

Additional EWC codes will also be added for the treatment facility to expand the types of waste the plant can process through the same permitted treatment methods of neutralisation, redox and precipitation following existing approved management systems, operating techniques and procedures.

This variation will allow the facility to accept an enhanced range of waste materials to ensure the best treatment options are available for the current market and will not change existing onsite processes or significantly increase the overall environmental risk of the site.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.

<sup>3</sup>A waste is considered as partly stabilised if, after the stabilisation process, dangerous constituents which have not been changed completely into non-dangerous constituents could be released into the environment in the short, middle or long term.
