

Appendix D.

Non-technical application summary.

This application is for a temporary discharge consent for untreated surface water to be discharged to ground to facilitate the construction/diversion of oil filled cables for the new Wylfa Power Station.

The discharge is rainfall which has entered our excavations/work areas and requires discharge to surrounding land to facilitate us in completing our works.

Water shall be pumped using a four-inch pump to the surrounding fields as identified on the Water Discharge Drawing. No contamination is present within the discharges. There is no discharging in/from areas of contamination. The discharge will be through a silt sock/bag. Controls are in place to monitor this discharge. A Water Management Plan is in place and adhered to on site – a copy has been sent with this application.
