Dear Dr. Owen,

We need more information about your application

Application reference: EPR/BV5386IX/V006

Operator: GS Yuasa Battery Manufacturing UK Limited

Facility: Unit 22, Rassau Industrial Estate, Ebbw Vale, Gwent, NP23 5SD

Thank you for your application received on 30th June 2020.

I need to ask you for some more information before I can do any more work on it.

Your submitted H1 Environmental Risk Assessment suggests that emissions of Lead to air from the process cannot be screened as insignificant when compared against the long term Air Quality Standard. In these circumstances we would normally require you to submit detailed modelling of emissions to air.

We have considered your justification for not submitting detailed modelling at this stage, and your concerns that there may be some double-counting due to the majority of the emission points included in the assessment having been operational for many years.

Please look at when the background concentration data used in the H1 assessment was taken, and whether you can disregard some emission points which would be included in the background. If this is the case, please amend and resubmit your H1 assessment but include only the emission points which would not have contributed to the background data.

Please note that your H1 assessment should be based on emission limits you propose to have in your permit, not on monitoring figures.

Please reply within 10 working days from the date of this letter. If we don't hear from you we must return your application and fee.

When we receive the missing items we'll continue to check the details in your application. If there's enough there for us to begin the process of deciding whether or not we can grant your application we say the application is 'duly made' and we'll let you know this by letter.
