

Good Afternoon,

I have finished my initial assessment of your application and require some additional information.

1. There are 3 water issues (springs) that require a 50m buffer zone. Area is in an SPZ phase 3.

ACTION: Please amend your application to show the correct buffer zones around water issues.

Please refer to the amended spreading map which includes no-spread buffers on these fields, the respective tonnage associated with the removal of spreading area has been deducted from the application.

2. Field 10 is at target indices 4 for phosphate. The amount of phosphate you are applying will result in a minor increase in phosphates. This would be unacceptable as it is twice the amount of target phosphate in soil and the area is in an SPZ which could result in applied nutrients infiltrating ground water.

ACTION: Please amend spread rate to a lower level to prevent increase soil indices of phosphate.

Spreading rate has been reduced by half from 36 t/ha to 18 t/ha, this now applies 27 kg P2O5/ha where crop off take is 54 kg P2O5/ha to give a net decrease over the cropping year

Your application will be paused until I receive a response. Please respond no later than 15/03/21.

Best regards

Ethan
