HOW DOES IT WORK?

Step 1: Primary Tank

The **PRIMARY TANK** clarifies the raw sewage of fats, oils, greases and organic solids. The sewage water then passes through an effluent filter, before discharging into the **BIOROCK** reactor.

Step 2: BIOREACTOR Process

Our **BIOREACTOR** further purifies the pretreated wastewater using a biological process. To naturally treat the wastewater, our systems use our unique **BIOROCK Media**, an exclusive and very efficient carrier material for bacteria.

Step 3: Discharge

Depending on the ground type, effluent will be discharged by gravity, or by a pump.

THE UNIQUE BIOROCK MEDIA

Our **exclusive media** is degradation-resistant, stable, and sustainable - keeping the purification system working effectively over the long-term. You will exclusively find it in **BIOROCK** systems.

SAVE MONEY WITH MONOBLOCK

One of the main benefits of having a **MONOBLOCK** sewage treatment plant is that it's a long-term, sustainable, and economic investment. Our system requires minimal maintenance, does not need electricity, and has a long lifespan.

You will constantly save on electricity, maintenance, and tap water costs as you can reuse the purified water for irrigation.
