

Gwynt y Môr Offshore Wind Farm – Met Mast Removal Works

Water Framework Directive Assessment

The guidance for Water Framework Directive Assessments clearly states that these are required for activities within 1nm of a WFD water body. The location of the proposed met mast removal works >12na miles offshore, to the North East of the wind farm array. The nature of the works are not likely to have an impact on the water environment. A full WFD Assessment should therefore not be required for the removal of the met mast.
