

Section 2 - Emissions to air, water and land

2 Emissions to air, water and land

Emissions to air, water and land are not present from the existing waste activities as managed under the existing permit EPR/XP3691EG. Except in the unlikely event of an emission to air occurrence from a rogue load, which is managed by existing control measures in the Site Management Plan.*

As described above emissions to air, water and land will not be present resulting from the proposed changes to the permit as detailed in Table 1 of Application Form 2C, Question 2b, of this application.

Table 2 has been modified to demonstrate were the existing permit, Site Management Plan and WRP** controls and limits the potential for there to be emissions to air, water and land,

Table 2 – Emissions (release)	
Waste Operation name	Use of waste in a deposit for recovery activity
Point Source emissions to air – Non present	
There are no point source emissions to air from recovery activity	
Clays Site Management Plan*	Proactive emissions to air control measures included in Section 2.8 are in place in the unlikely event of an emission to air occurrence from a rogue load identified as part of the material acceptance and control procedures and complaints procedure is in place.
Waste Recovery Plan**	WRP, Section 3.7.1. limits permitted material waste types to soils and aggregates
Point Source emissions to water (other than sewers) – Non present	
There are no point source emissions of polluted water from recovery activity	
Waste Recovery Plan**	WRP, Section 3.7.1. limits permitted material waste types to soils and aggregates
Point Source emissions to water sewers effluent treatments plants or transfers off site – Non present	
There are no point source emissions to water sewers from recovery activity	
Waste Recovery Plan**	WRP, Section 3.7.1. limits permitted material waste types to soils and aggregates.
Clays Site Management Plan*	Section 2.1 Amenity Facilities Portable toilet is only source site generated sewerage effluent disposed off site by a qualified contractor.
Point Source emissions to Land – Non present	
There are no point source emissions to land from recovery activity	
Waste Recovery Plan*	WRP, Section 3.7.1 limits permitted material waste types to soils and aggregates.
