

Section 3 - Operating Techniques

3a Type of operation and options chosen for controlling / preventing emissions

As described in Table 2 of application Form 4C, Question 2b of this application, emissions to air, water and land will not be present resulting from the proposed changes to the permit as detailed in Table 1 of application Form 2C, Question 2b, of this application.

The existing permit EPR/XP3691EG and Site Management Plan contain systems and procedures to prevent non-permitted wastes being deposited at site and to manage and control rogue loads if they do occur.

Table 3a1 summaries the options chosen for controlling / preventing emissions extracted from the existing permit, Site Management Plan and WRP.

Table 3a1 – Type of operation and options chosen for controlling / preventing emissions	
Description of waste operation	Type of operation and options chosen for controlling / preventing emissions from waste operation
Deposit for recovery	<p>Ongoing deposit waste for recovery activity to complete construction new golf facilities in accordance with specifications in the approved Waste Recovery Plan A02*.</p> <p>There are no point source emissions to air, water and land from recovery activity as described in Table 2:</p> <p>This achieved through existing versions of:</p> <ul style="list-style-type: none">• Waste Recovery Plan*• Clays Site Management Plan**• Clays Site Risk Assessment*** <p>Existing options chosen for ensure emissions do not occur:</p> <ul style="list-style-type: none">• limitations of permitted waste types and their form• site acceptance procedures• site mitigation plans• All liquids in containers, whose emission to water or land could cause pollution, shall be provided with secondary containment. i.e. only non-waste liquid on site - fuel• Maintenance procedures and maintenance contracts to maintain plant and portable toilet.
