### **Introductory note**

**This introductory note does not form a part of the notice.**

The following notice gives notice of the variation and consolidation of an environmental permit.

This permit variation is for the continued permitted operation of seven 4.65 MWth input natural gas fuelled spark ignition reciprocating engines (one 32.6 MWth input Specified Genrator) at Culvery Power Limited, Pentre. Given the increasing requirement for flexible forms of electricity generation to complement increased penetration of renewable energy the previous operating hours limit was insufficient. This variation increases the operational hours from 2500 hours per year to 4000 hours per year. Due to changes in habitat screening distances for natural gas fuelled Tranche B Specified Generators this plant has changed from a simple bespoke plant to a complex bespoke plant.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
