

Document reference No 3

The figure for daily per capita water consumption from the British Water website for serviced holiday caravans is 150 litres. The figure for domestic properties is the same. As our units are not equipped with washing machines or dishwashers we think this figure is too high.

Since July 5th last we have been monitoring water consumption and caravan occupancy and our figure for actual consumption is 135 litres per capita per day, see the attached data sheet.

The existing permit assumes 2 occupants per unit.

Reference Appendix 1

The current infiltration system will be extended to meet the requirements of BS6297:2007 + A1:2008
