Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

The schedules specify the changes made to the original permit.

This variation is to authorise the installation of a new aerial gas scrubber to support the processing of gaseous releases from materials stored in the ('Befesa Fine Aggregate', BFA) intermediate storage area.

Similar scrubbers are already present on site. Gas extraction is currently served by an existing wet gas scrubber; however, processing capability of this equipment is divided between processing emissions from the storage area as well as a filter belt area. The installation of a new scrubbing unit, as per this variation, will provide a dedicated gas scrubber for the storage area, thereby increasing the fume cleaning capacity in the BFA storage area and indirectly provide additional capacity for the filter belt canopy. The existing fume cleaning capacity will remain in situ.

The variation has required an additional point source emission to air to be added to the permit. The operator has also proposed a reduction of the site's ammonia emission limit values as part of this variation.

The status of the existing improvement conditions has also been updated following the receipt of information from the operator. Additionally, an error found with the site diagram used in version EPR/VP3030BX/V005 (the previous permit) has been corrected with this variation.

These changes have been consolidated into the permit. The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
