### **Introductory note**

**This introductory note does not form a part of the notice.**

The following notice gives notice of the variation and consolidation of an environmental permit.

The permit variation intends to:

- include the addition of a Flue Ace system (A9) which aims to recover heat to pre-heat water prior to heating by the boilers, resulting in a reduction in natural gas used by the installation;
- address the planned addition of 12 fermentation vessels and 4 additional silos, and the installation and operation of a fourth bottling line within the existing Installation boundary;
- add a release point for the discharge of surface water (W5) from the newly constructed lorry park to the highways drainage system;
- extend the site boundary to the south to incorporate a new modular storage facility;
- remove the two original (A5 and A6) CHP plant emission points from the permit; and
- downgrade the Part A activity for the burning of fuel in plant with a rated thermal input of >50MW, to a Part B activity for burning any fuel in a boiler with a net rated thermal input of 20 or more megawatts, but a rated thermal input of less than 50 megawatts.

One new emission point to air (A9), and one new discharge point (W5) shall be added due to the variation; however, it is planned that the variation shall also remove two existing emission points from the permit (A5 and A6). The variation also changes the registered company address on the permit and removes the requirement for sulphur dioxide monitoring on emission points A1 – A4 as fuel oil is no longer used as fuel in the combustion units.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
