### **Introductory note**

**This introductory note does not form a part of the notice.**

The following notice gives notice of the variation and consolidation of an environmental permit.

Biffa Waste Services Limited has applied for a variation to the permit to extent the waste codes to allow a wider range of stable hazardous non-reactive waste to be accepted in the monocell that was reserved for asbestos waste.

The application has four parts that were assessed for the variation:

- The extension of Schedule 2 Table S2.4 of the permit to include additional waste codes that are classified as Stable Non-Reactive Hazardous Wastes (SNRHW), to be deposited into the cell previously designated for asbestos waste only.
- Extend the hazardous characteristics displayed by wastes imported under waste codes 17 05 03 and 19 13 01, limited to inorganic substances only.
- The discharge of treated waters/leachate from the SNRHW monocell to sewer following initial treatment in the on-site Leachate Treatment Plant (LTP).
- Removal of the requirement to install, maintain and monitor inclinometers within the separation bund constructed around the edges of the asbestos/SNRHW monocell.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
