Notice of variation and consolidation with introductory note

The Environmental Permitting (England & Wales) Regulations 2016

Tata Steel UK Limited

**Morfa Hazardous Landfill
Port Talbot Installation
Port Talbot Works
Port Talbot
West Glamorgan
SA13 2NG**

Variation number

EPR/BW2692IM/V005

Permit number

EPR/BW2692IM

Morfa Hazardous Landfill

Permit number EPR/BW2692IM

Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

The permit has been consolidated to incorporate the original permit and all subsequent variations. The varied permit is now based on our standard landfill template. The technical decisions made during determination of the original application have not been revisited, other than the changes specified below.

This permit variation will regularise the emissions monitoring tables as described within Schedule 3 of the permit, to reflect the currently agreed monitoring programme adopted by the Operator, and subsequently agreed with the Local Regulating Officer for the site.

This variation also seeks to update the monitoring tables now specified within Schedule 3 of the permit, in order to ensure that the permit's monitoring requirements are clear and consistent in future.

An additional four EWCs have also been added to the permitted waste types specified within Schedule 2 of the permit.

The rest of the installation is unchanged and continues to be operated as follows:

The installation in its entirety consists of the whole steel works including the Morfa non-hazardous and Morfa hazardous landfills.

This permit is for the Morfa Hazardous Landfill and is an installation which accepts waste produced exclusively by Tata Steel UK Ltd. The wastes are mainly industrial sludges or slurries arising from steel production at Port Talbot Steel Works, South Wales. The landfill is constructed in accordance with the requirements of Schedule 2 of the Landfill Regulations 2002. The permitted maximum input capacity is 75,000 tonnes per annum. The projected lifespan is expected to be around 20 years.

The western boundary comprises a series of coastal barrier dunes on the seaward edge, whilst the southern edge of the site abuts against the Kenfig River, both of which are part of an EC protected nature reserve. The eastern boundary is defined by the low-lying Margam Moors which is a registered SSSI.

The schedules specify the changes made to the permit. Schedule 1 of the notice specifies the conditions that have been varied and Schedule 2 comprises a consolidated permit which reflects the changes being made.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.

Status log of the permit		
Description	Date	Comments
Application EPR/BW2692IM received	04/12/2003	
Request to extend determination	07/04/2004	
Permit determined	17/12/2004	
Variation Notice SP3633MK issued	24/05/2007	
NRW Initiated Variation request approved EPR/BW2692IM/V003	30/09/2013	Variation request to add an EWC code and amend operating techniques to allow for the disposal of hazardous waste produced during a tyre fire pollution incident
Variation determined EPR/BW2692IM/V003	31/10/2013	Variation Notice Issued
NRW Initiated Variation Issued EPR/BW2692IM/V004	30/11/2016	Variation issued to update financial provision agreement
Variation Application EPR/BW2692IM/V005 Duly Made	07/07/2021	Application to update permit monitoring requirements and consolidate permit
Permit variation determined EPR/BW2692IM/V005	21/10/2021	Varied permit issued
