Table 1 Licensed Dredge / Disposal Activities

Activity 1 Dredging and Deposit of Monkstone Marina		
Marine Licensable Activity Type	Dredging and Deposit using water injection dredging	
Description	Water injection dredging of Monkstone Marina to remove naturally accumulated sediment deposited from the River Neath. Movement of jet bar across the seabed while the nozzles inject large volumes of water at low pressure into the sediment layer. The density of the soil layer is lowered until it shows fluid behaviour. This fluidized sediment layer is then transported horizontally within the lower part of the water column with the hydrostatic pressure difference, gradient of the seabed and the tidal and current flows allowing the sediment to reenter the River Neath for natural dispersal.	
Maximum Dredge Depth	1.2 metres	
Maximum Dredge volume and tonnage [for disposal only] for material deposited under this licence	Tonnage per year
