March 1, 2017

Dear Ms Parr

Re BS23301M

Annual reporting requirements.

In the year to December 2016 there were no major changes to processes, chemicals or dyes. As noted previously there are ongoing changes made by suppliers to conform to latest environmental legislation.

A reduction in demand over the year resulted in a year on year reduction in print volume of 1.4%.

Energy consumption fell over the year with an electricity usage decrease of 10.6% and a gas usage reduction of 10.0%. A reduction of 1.4% in print volume and periods of non production were the major reason for the reduction in usage.

Water usage decreased by 4.4% over the period as a result of volume of new designs reducing on previous year along with reduction in print volumes.

No hazardous chemicals were disposed of over the period.

There were no spillages or notifiable incidents over the period.

No fugitive emissions were identified.

The main possible fugitive emissions are steam and dust.

Steam obviously presents minimal problems. Dust extraction and collection systems are regularly checked and maintained.

March 1, 2017

We have one boiler which is regularly inspected and maintained in accordance with manufactures instructions.

The bulk storage tanks are bunded and regularly inspected in accordance with BAT.

In respect of emergency procedures there were no incidents in the period and no amendments are considered necessary.

Yours sincerely
