

Odour Management Plan Gaufron Farm

The following plan has been prepared as part of the EPR permit application.

The following tables highlight the likely sources of odour arising from pullet production at Gaufron Farm.

Actions and measures are listed that will prevent where possible or minimise odour emissions at Gaufron Farm.

Site plan shows all material storage areas and potential odour emission sources.

Plan to be reviewed every year from permit issue date, prior to any major changes to operations (to ensure effectiveness) or following any complaint, any changes to OMP or other management plans to be documented dated and signed and Area Officer notified.

Actions and preventative measures in OMP referenced from Odour Assessment Document and Fugitive Emissions Assessment in line with the H1 Risk Assessment, to be implemented in conjunction with the following key documents;

Emergency Plan

Technical Standards

Routine Maintenance Schedule

Health Plan

Contingency's

Environmental Management

Key responsibility for the OMP and the referenced plans are the Operator or deputies who have been briefed on the requirements.

Example Odour Complaint form attached.

The table below lists all sensitive receptors with 400m.

Gaufron Farm

Receptor Name	Description	Distance	Orientation	National Grid Reference
Residence	Residential (managers house)	On Site	N/A	303967,256725
Residence	Residential (managers house)	On Site	N/A	303957,256677
Lower Gaufron Farm	Residential	180m	North East	304144,256954
Lower Gaufron Bungalow	Residential	300m	East North East	304338,256841
Pen y Wern	Residential	360m	South West	303747,256353
Residence	Residential	330m	South West	303964,256453
Residence	Residential	360m	South West	303686,256515
Residence	Residential	375m	North East	304429,256875
Caravan Park	Residential	410m	North East	304537,256934

Odour Related Issue	Potential Risks and Problems	Actions taken to minimise odour and odour risks at Gaufron Farm	Completion date
Pullet Production	Odour levels	Twice daily olfactory checks coinciding with stock inspections (normally 07.00-10.00 hrs and 16.00-18.00hrs) any abnormalities recorded and investigated – see contingencies and routine maintenance and inspection schedule.	If required
Manufacture and selection of feed	Milling and mixing of compound feeds. The use of poor quality and odorous ingredients. Feeds which are ‘unbalanced’ in nutrients, leading to increased excretion and litter moisture and emissions of ammonia and other odorous compounds to air.	No on-site milling and mixing. Feed specifications are prepared by the feed compounder’s nutrition specialist. Feed is supplied only from UKASTA accredited feed mills, so that only approved raw materials are used. Protein is reduced in accordance with SGN EPR6.09 ‘How to comply with your environmental permit for intensive farming’ ‘How to comply with your environmental permit for intensive farming’.	In place

Feed delivery and storage	<p>Spillage of feed during delivery and storage. Creation of dust during feed delivery.</p>	<p>Feed delivery systems are sealed to minimise atmospheric dust. Any spillage of feed around the bin is immediately swept up. The condition of feed bins is checked frequently so that any damage or leaks can be identified. Feed deliveries are monitored to avoid dust and spills – As per routine inspection and maintenance schedule. See site plan.</p>	In place
Ventilation and heating Systems/Dust	<p>Inadequate air movement in the house, leading to high humidity and wet litter</p> <p>Inadequate system design, causing poor dispersal of odours. Extraction fans located close to sensitive receptors.</p> <p>Dust</p>	<p>Use of high velocity extraction fans to aid dispersion, checked prior to cycle commencement by qualified electrician who will provide 24hr breakdown cover – See electrical service reports The ventilation and heating system is regularly adjusted to match the age and requirements of the flock. The ventilation system is designed to efficiently remove moisture from the house. Gable end fans operated only during hot weather to aid cooling. Humidity recorded daily and maintained in the range of 55 – 65% keeping a balance of dry litter and avoiding dust production. Stock inspections carried out by trained staff to avoid panicking birds creating dust. Dust levels if present is controlled during cleanout operations - As per routine inspection and maintenance schedule and clean out operations.</p>	In place

Litter management	Odours arising from wet litter (see above).	Controls on feed and ventilation (see above) help to maintain litter quality. Additional controls include:- Use of nipple drinkers with drip cups to minimise spillage. Daily checks of drinker height and pressures to avoid capping. Insulated walls and ceilings to prevent condensation. Concrete floors to prevent ingress of water. Stocking levels at optimum to prevent overcrowding. Use of veterinarian bespoke health plan. See health plan	In place
Carcase disposal	Inadequate storage of carcasses on site.	Carcasses placed into plastic sealed bags, stored in sealed vermin proof containers awaiting regular incineration in a licensed incinerator. Daily levels of mortalities recorded with abnormalities investigated – See health plan	In place

House clean out	<p>Creation of dust associated with litter removal from houses.</p> <p>Use of odorous products during cleaning.</p>	<p>Litter carefully placed into trailers positioned close to doors.</p> <p>Trailers sheeted before leaving fill position.</p> <p>Only DEFRA approved and suitable products used. Chemical containers triple washed at point of use.</p> <p>Wash water tank levels monitored during washing and emptied as required to prevent overfill – See Key responsibilities</p> <p>Clean out carried out as soon as possible following destocking. (3-4 days)</p>	<p>In place</p> <p>In place</p>
Used Litter	<p>Storage of used litter on site.</p> <p>Transport of litter and land spreading.</p>	<p>No storage on site at any time.</p> <p>All trailers sheeted before leaving fill position.</p> <p>Avoidance of double handling.</p> <p>All litter exported off site.</p>	In place
Washing operations including vehicles	<p>Loss of dirty water to Land or Watercourse</p>	<p>Use of specialist contractors for washing operations.</p> <p>Bespoke terminal hygiene program followed, detailing quantities of water and chemical dilution rates.</p> <p>Key staff monitoring washing operations ensuring effective drainage to dirty water tanks.</p> <p>Dirty water tanks monitored during wash down to maintain freeboard –See Key responsibilities</p> <p>Vehicle washing at designated wash point.</p> <p>All sediment traps and drains cleaned both before and after washing operations – See Inspection and maintenance schedule</p>	In place
Fugitive emissions	<p>Leaks to doors, bin pipes, feed bins, fuel and chemical storage</p>	<p>Checks to feed storage and fill pipes as per routine maintenance schedule.</p> <p>Fuel oil in approved bunded storage tanks.</p> <p>Chemicals – only small amounts of footdip disinfectant held on site in secondary containment</p>	In place

Dirty water management	<p>Standing dirty water during the production cycle or at clean out.</p> <p>Application of dirty water to land.</p>	<p>Working areas around houses are concreted and kept clean during production cycle.</p> <p>At clean out dirty water from houses together with lightly contaminated yard wash is directed to the storage tanks (see site plan), before being removed off site and spread to land under control of operator.</p>	In place
Abnormal operations	<p>Water leak/pipe failure</p> <p>Bird health/sickness</p>	<p>Water consumption monitored daily ensuring early detection, wet area - blanket covered with top up bedding material to prevent increased odour.</p> <p>Veterinarian contacted (24hour cover) Litter covered with fresh top up bedding to minimise increased odour until bird health recovered –See health plan</p> <p>Abnormal events documented, dated and signed, appropriate plans reviewed and updated to prevent reoccurrence ie. Routine maintenance schedule, Technical standards</p>	In place
Waste production/storage	Odour from production or storage areas	<p>No storage or production of odorous waste on site.</p> <p>Waste management plan in force detailing types and quantities produced along with disposal routes. Records kept on site.</p>	In place
Materials/storage	Potential odour source	<p>Feed delivered into sealed vermin proof silos.</p> <p>Sealed delivery system into poultry houses with no milling or mixing on site.</p> <p>Remaining feed at end of cycle stored in sealed silo and used on subsequent cycle.</p> <p>Marked on site plan.</p> <p>3 month shelf life of feed negating the need for removal.</p> <p>Raw materials inventory recorded and kept on site – See key responsibilities</p>	

		Cleaning chemicals stored on site in a bunded frost free secure store.

Odour Complaint Form

Installation Name	Date Recorded	Reference Number
Name and Address of caller:		
Tel. No. of caller		
Location of caller in relation to Installation		
Time and Date of complaint		
Date, Time and duration of Offending odour		

Has the caller any other Comments about the odour?	
Weather conditions	
Wind strength and direction	
Any previous complaints Relating to this odour?	
Any other relevant information	
Potential odour sources that could give rise to the complaint	
Operating conditions at the time offending odour occurred	
Follow up	

Date and time caller contacted			
Action taken			
Amendment requirement to Odour Management Plan			
Form completed by		Signed
