

**Non-Technical Summary of Application for a Minor Technical Variation to  
Environmental Permit EPR / DP3832EF**

In the original application, no discharges to sewer were reported. It has since come to light that this was an omission. The discharge to sewer of various organic solvents and mineral acids (for which a DCWW Trade Effluent Consent is in place) needs to be included in the permit, hence the application for a variation. Details of the discharge are given in document NMJ-CDTE-02, and the Trade Effluent Consent letter is also included.
