

Reporting Condition 4.1.4

The company has committed within its Environmental Management System to a reduction of 10% for key items listed within the attached report. These reductions reported are relative to the production tonnage achieved within the reporting year.

As a result of the production process remaining on 'stand by' throughout 2014 it is not possible to compare with the previous year and hence the aimed reduction becomes meaningless.

Total usage figures are provided in the attached report and are summarized below

<i>Total Energy (kwh)</i>	<i>1,427,344</i>
----------------------------------	-------------------------

<i>Supplied Water (litres)</i>	<i>7,745</i>
---------------------------------------	---------------------

<i>Nox as NO2 (kg)</i>	<i>0</i>
-------------------------------	-----------------

<i>Oils (litres)</i>	<i>0</i>
-----------------------------	-----------------

<i>Mill Scale Produced (tonnes)</i>	<i>0</i>
--	-----------------

Going forward as a result of the temporary stoppage in production it is proposed that 2012 data be used for targeting and comparison of the current year (subject to an early start to production)

2012 Natural Gas

Electricity

2013 Natural Gas

Electricity

*

As there was no production during the year 2014 we are unable to compare this with previous years

Electricity was consumed predominantly for heating and lighting

(iii) Supplied Water

2013 Welsh Water

Non Potable Water ex United Utilities

2014 Welsh Water

Non Potable Water ex United Utilities

*

As there was no production during the year 2014 we are unable to compare this with previous years

(iii) Oil Usage

2013

2014

*

Only mobile plant has been operated during the year. This is supplied and serviced by a 3rd party who are responsible for the disposal of used oils

*

As there was no production during the year 2014 we are unable to compare this with previous years
