

Schedule 1 – 5.1.1 Notification

PART A

Permit Number:	BR9715B
Name of Operator:	Solutia UK Ltd
Location of Installation:	Corporation Road, Newport, Gwent, NP194XF
Location of the emission:	Therminol 3 – CO ₂ vent
Time and date of the emission:	10/07/2017 - 02:23

Substance(s) emitted	Media eg air /water	Best estimate of the quantity or the rate of emission	Time during which the emission took place
Liquid Benzene & Biphenyl	Discharge to interceptor, some would be as vapour	Approximately 115 L	The release is thought to have occurred throughout a duration of ~59 seconds

Measures taken, or intended to be taken, to stop the emission:	<p>The release is thought to be as a result of residual pressure in a process line whilst entering a CO₂ purge cycle. The associated discharge was for a relatively short duration whilst the pressure dissipated</p> <p>As mentioned, the release was to bespoke drain(s), with N₂ inerted interceptor facility, and so it is envisaged that there is a limited release to effluent & atmosphere</p> <p>Temporary procedure modification in place, and an investigation initiated in order to prevent a recurrence of similar nature. Detail to follow in the Part B</p>
