Dequest 2010 Batch – acidic components	Local drain to effluent system, plus some localised fume	~2.5m^3	Approximately 2hr

Measures taken, or intended to be taken, to stop the emission:	A failed bellows resulted in a quantity of liquid from the 2010 reactor being released to the bunded area, and then to effluent treatment via drain. The remaining proportion of the batch was transferred-out to limit the loss In addition, the area deluge system was activated as a precaution to minimise any fume release outside of the immediate area
