Proposal summary

Please provide an outline of your proposal, including any sketches.

As a guide, you should include: a description of the activities which (will) take place at your site, the means of abstraction/impoundment proposed, if the proposal is related to another licence or permit (i.e. an Environmental Permit to Discharge Water) and details of any survey work undertaken. For changes to existing licences, summarise the changes proposed. Sketches or photographs that will aid our understanding of your proposal can be uploaded below.

The need for water extraction is related to the A40 river erosion protection scheme previously discussed with Rachel Thomas. The original design was to "drill" the holes needed to install the ground anchors by blasting air, however issues in relation to the ground conditions were established as part of the trial ground anchor installation. As such it has now been determined that the most appropriate method to install the required ground anchors is to use water flushing hence the request to extract water from the river.

Due to the volume required it is proposed to obtain it from a mix of sources including the river and the nearest DCWW hydrant at different times.

The means of extraction will be via hose and pump.
