4. Details of our assessment

Officers had a meeting with the Director before carrying out the site inspection.

The Combined Heat and Power (CHP) unit (NB1) was operational at the time of the inspection. The plume was barely visible and there was no odour identified on site.

Fuel for the CHP was mixed outside before being stored inside NB4's (non-operational CHP unit) bunker. This fuel mix was then utilised within NB1.

The fuel consisted of virgin wood, wastes specified by the permit and appeared free of contamination.

Skips containing fly-ash and Incinerator Bottom Ash (IBA) were stored outside and were covered with tarpaulin.
