### **Introductory note**

**This introductory note does not form a part of the notice.**

The following notice gives notice of the variation and consolidation of an environmental permit.

This permit introduces a Multipurpose Waste Treatments and Remediation Pad (MWTRP) to the permitted activities undertaken at the site. As such, the Standard Rules Permit set SR2012 No. 8 has been included within the permit to allow for the operation of a composting facility on the Multipurpose Pad.

The MWTRP will allow the following two distinct waste activities to take place:

1. Waste Treatment Facility (WTF) – treatment and bioremediation of hazardous and non-hazardous waste including soils and sludges; and
2. Green Waste Composting Facility.

The MWTRP comprises a single impermeable surfaced pad. The northern most part of the pad is used for the composting of green waste at approximately 3,250m<sup>2</sup>. Adjoining this is an area used for the bioremediation of contaminated soils or sludge's, with a footprint of approximately 6,000m<sup>2</sup>. Each area is separated by a low level bund. The MWTRP site infrastructure is located in the southern area of the application site which includes two process water tanks (within a bunded enclosure), a bio filter, air/water separators with attendant process equipment and a substation. The area to the west is used for processing the green waste and compost. Additionally, there are two surface water drainage lagoons; one located within the southern part of the site and the other within the north-eastern part of the site.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
