

Schedule 5 - Notification

These pages outline the information that the operator must provide.

Units of measurement used in information supplied under Part A and B requirements shall be appropriate to the circumstances of the emission. Where appropriate, a comparison should be made of actual emissions and authorised emission limits.

If any information is considered commercially confidential, it should be separated from non-confidential information, supplied on a separate sheet and accompanied by an application for commercial confidentiality under the provisions of the EP Regulations.

Part B - to be submitted as soon as practicable

Any more accurate information on the matters for notification under Part A.	The addition of an electrode occurred on two occasions. Each electrode change takes approximately 5 minutes. The emissions are drawn up to the roof canopy extraction system, reducing the potential of complete combustion. The emissions then travel to the dedusting plant. Therefore, CO generation increases during these times. The furnace manager is currently investigating the possibility of reducing the duration of electrode changes to reduce the resultant CO peaks. During an electrode change on a separate occasion, a crane breakdown occurred which extended the duration of the electrode change. This caused a CO peak. It was also noted on the Shift Report that a small number of compartments of the dedusting plant had cleaning faults due to high differential pressure. They were reset manually once observed.
Measures taken, or intended to be taken, to prevent a recurrence of the incident	As above.
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	As above.
