

Schedule 5 - Notification

These pages outline the information that the operator must provide.

Units of measurement used in information supplied under Part A and B requirements shall be appropriate to the circumstances of the emission. Where appropriate, a comparison should be made of actual emissions and authorised emission limits.

If any information is considered commercially confidential, it should be separated from non-confidential information, supplied on a separate sheet and accompanied by an application for commercial confidentiality under the provisions of the EP Regulations.

(a) Notification requirements for any malfunction, breakdown or failure of equipment or techniques, accident, or emission of a substance not controlled by an emission limit which has caused, is causing or may cause significant pollution

To be notified within 24 hours of detection	
Date and time of the event	06/09/2015, 14:55
Reference or description of the location of the event	DED Dedusting Plant

Measures taken, or intended to be taken, to stop any emission	Plant shut down immediately until extraction (dedusting) plant was re-operational.
Description of the failure or accident.	A failure with the DED dedusting plant which acts as the main extraction to the Electric Arc Furnace. A number of the DED compartments were in fault due to a problem with dampers not closing on dust cleaning. Potential for dust to be released to atmosphere as not captured by the dedusting plant.

Part B - to be submitted as soon as practicable

Any more accurate information on the matters for notification under Part A.	A failure with the DED dedusting plant. A number of the DED compartments were in fault due to a problem with dampers not closing on dust cleaning. This was picked up at the EAF and several attempts were made to reset the compartments back to normal operating conditions. The Plant (main EAF melting process) was stopped due to poor extraction, whilst the fault was being investigated and trying to remedy same. The whole extraction system had to be shut down and all systems reset – this includes all extraction and booster fans and filter plant. A summary time line of events can be seen below: • Fault – identified - 14:55pm • Attempts made to remedy fault • Melting process ceased 15:00pm • Fume extraction – fans/DED all shut down • All Systems reset • Fans and DED restarted - 15:17 • Plant resumed melting - 15:19pm
Measures taken, or intended to be taken, to prevent a recurrence of the incident	Plant is continuously monitored within the EAF control room so response time to any issues can be immediate.
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	EAF plant shut down immediately once the dedusting plant failed and was not re-started until such time that adequate extraction was available.
