Part B - to be submitted as soon as practicable

Any more accurate information on the matters for notification under Part A.	It has been identified that water leaks in the T1 and T2 ducting within the quench tower are preventing complete combustion. This results in higher than normal off gas emissions. Weekly inspections and subsequent repairs are being completed during Planned Preventative Maintenance (PPM) downtime. New access equipment has been obtained eliminating the need to construct scaffolding each time. This has increased the time available to work on the ducting from 3-4 hours to 6-7 hours. Significant repairs were also completed during a 48 hour stop last week which has improved the condition of the ducting resulting in an improvement in emission levels. During the annual two week maintenance shutdown, the ducting panels are to be replaced.
Measures taken, or intended to be taken, to prevent a recurrence of the incident	As above.
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	As above.
