Dear Mr Price

### Compliance Assessment Report

- the Environmental Permitting (England and Wales) Regulations 2007 (RP3433UF)

When we visited your farm on *the* 16<sup>th</sup> of November 2009 we noted that there was an area of non-compliance in relation to the above regulations that apply to your farm. I list them below together with the actions you need to take.

#### 1. Breach of Condition 2.5.1

Your site drainage review and housing review as required in Table S1.3 of your permit are still outstanding. In order to ensure your compliance with your permit could you please send me this information at your earliest possible convenience.

As discussed during the inspection you are required to implement infrastructure improvements on site in order to ensure adequate dirty water containment. Following our discussions it was agreed that a new dirty water tank and some additional concrete work would be completed within 12 months of the date of this letter (23/12/2010.) This information should be included in your drainage review plan as a necessary improvement.

Could you please send me written confirmation agreeing to be above works and timescales.

Please contact me if you have any questions about this letter or the regulations.

Yours faithfully
