Schedule

Proposed Activities

You have applied for an environmental permit to carry out the following Schedule 1 listed activities:

Section 5.3 Part A (1) (a) (iii) - Disposal or recovery of hazardous waste with a capacity exceeding 10 tonnes per day involving blending or mixing prior to submission to any of the other activities listed in this Section or in Section 5.1;

Section 5.3 Part A (1) (a) (iv) - Disposal or recovery of hazardous waste with a capacity exceeding 10 tonnes per day involving repackaging prior to submission to any of the other activities listed in this Section or in Section 5.1;

Section 5.6 Part A (1) (a) - Temporary storage of hazardous waste with a total capacity exceeding 50 tonnes pending any of the activities listed in Sections 5.1, 5.2, 5.3.

This will allow for the acceptance, storage and treatment of hazardous waste only. Supporting information provided with your application details that the site will also have an annual throughput of 10,500 tonnes of non-hazardous waste. You have not included this within your application, so we would currently only be able to permit the listed activities above, and include hazardous waste within the list of permitted wastes.

Can you please confirm if you wish to include waste transfer and treatment activities in your permit for non-hazardous waste?

If yes, you will need to update Part B3 of your application to relect this as well as all supporting documents to include procedures for non-hazardous waste. Your Opra profile may also need to be updated, and a waste Opra may need to be completed.

If no, please update all supporting documents to remove anything not included within the listed activities applied for.

You have stated in your NTS that other waste management activities will also be undertaken which do not fall into the scope of EPR. Can you please clarify what these activities are?

Waste Storage

Some of the waste types you have included in your list of permitted wastes have specific storage requirements, such as asbestos, and lead acid batteries. Can you confirm what procedures and storage measures will be in place for their acceptance to site.

Emissions to air

An assessment for emissions to air was carried out in document B4.1, provided with your original application. The assessment was carried out using the release height, and height of nearby buildings. The emission point has since moved, and the proposed solvent storage tanks are a different size. Can you please demonstrate that these changes in your proposals do not negatively affect the potential impact of emissions to air from the site.
