Subject: St Pierre Poultry Farm

Following our phone conversation on 14th Jan 2010 re this Variation.
To let you know background - an application was submitted on 22 June 2009 and was duly made on 28/07/09. Because of back log this wasn't picked up by the permitting team until November 2009.

The reason for the Variation Notice is stated below and this wording is due to appear on the Variation Notice:

The applicant has applied for a variation to increase the stocking capacity of chicken pullets from 100,000 to 105,000 within the existing housing. The variation is requested to take into account early mortalities of the chicks on site. The farm building structure and management procedures remain the same in relation to the rearing of poultry in a floor rearing system, for egg production. Day old chicks arrive at the farm and remain for 16 weeks before being transported to laying farms. This is considered to be a Normal Variation.

Since November an initial screening took place and this was submitted to the Technical Team for detailed assessment. This has just been completed.
All sites screened out apart from Bushy Close SSSI which screened in. A consultation with CCW (submission of Appendix 4) will now take place. This has a 28 day period of consultation.

I'm glad I spoke to you before you went to do your inspection. Do contact me after your visit and discuss whether any issues have arisen.

Many thanks
Carol
