Comments	Reviewed numbers from last crop. Total approx 76,000. Site operating below the permitted 79,000 places. Concrete pad – The pad is showing some signs of damage around manhole outside house number 2. I was assured that repair will be made shortly. The cracks are well away doors and have been sealed with tar so I am satisfied that there is no risk to the environment in the short term but note this repair should arranged and scheduled within your maintenance plan. Dust and Algae around fan – I noted some build up of dust and black algae around the phase 1 fan on the first poultry house, along with evidence of scorched grass on banking. I suggest that at least one of the following options to limit extent of dust in this area is implemented; 1) A hood installed on the extraction fan to direct exhaust gases downwards. 2) Area along side of building is resurfaced to make cleaning easier. 3) Culverting of where open ditch is next to phase one fan. Hazardous Waste Regs – I noted that an annual waste transfer note (season ticket) has been issues by Sunvalley for transfer of fluorescent tubes. You should be aware that these bulbs are hazardous waste and therefore must each transfer should be accompanied by a Hazardous Waste transfer note in order to comply with The Hazardous Waste Regulations 2010. As your site is below the 500Kg threshold you are not required to register as a producer, however Sunvalley should still be providing you with a hazardous waste consignment note for each transfer. This issue has been raised with the EA officers who regulate Sunvalley in Hereford. Please ensure you obtain hazardous waste consignment notes from them for any future

Overall compliance *	movements of hazardous waste.
