Any more accurate information on the matters for notification under Part A.	Mother board failure in the Oxygen analyser that provides data for correcting the Emission Point A CEMS emission data
Measures taken, or intended to be taken, to prevent a recurrence of the incident	The mother board has been changed
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	<p>It is believed that no permanent harm will result from the incident. Uncorrected measurement data for SO<sub>2</sub>, NO and NO<sub>2</sub> suggests that the process remained in control throughout the period where the oxygen measurement had failed</p> <p>NO<sub>x</sub> and SO<sub>2</sub> are related to the raw material chemistry. Both are at similar levels before and after the week of these reports. We have no reason to believe that the raw material chemistry changed during that time. This is reinforced by the raw data trends being at normal levels for achieving compliance after correction</p>
