

QPXX – Residue Management Plan

Overview

Waste accepted into the Carmarthen site fall into two main categories, Bulk Waste & Packages Waste. Waste is then subdivided into further categories dependant on how the waste will be processed on site. Each activity looks at the waste feedstock and its process to optimise the waste management solution in terms of the waste hierarchy.

The Waste Hierarchy

Review & Improvement

The Site Manager, in conjunction with the Compliance Team is responsible for reviewing the following Residue Management Plan Table (Table 1 below) annually in line to identify any changes to residues and their fate including opportunities for reduction and improvement of environmental outcomes in line with the waste hierarchy. The plan will be reviewed more frequently in light of any major changes.

Residue Management Plan

The residues produced by activities on site including management in line with the waste hierarchy and areas for potential improvement and future review are detailed in Table 1 below:
