### Introductory note

#### **This introductory note does not form a part of the permit**

The main features of the permit are as follows.

This is a Tier 3 bespoke permit for a hazardous and non-hazardous waste transfer station with treatment.

Treatment operations are limited to manual and/or mechanical sorting, separation, shredding, crushing, granulating, mixing, repair and/or refurbishment, baling, and bulking up for the purpose of disposal or recovery.

Permitted waste types consist mainly of sludges and liquids, as well as packaging, Waste Electrical and Electronic Equipment (WEEE) and municipal wastes.

The maximum quantity of waste accepted and processed on site shall not exceed 15,000 tonnes per year.

Relevant storage and treatment capacity thresholds have been included in the permit to reflect the legal waste facility operational limits; above which, the site would be operating as an Industrial Emissions Directive installation. (See Table S1.1 for relevant limits.)

All point source emissions are regulated via EPR/YP3937SH as the site boundaries for the two permits completely overlap.

All emissions from the activity which are not controlled via actual emission limits, are controlled through the 'emission of substances not controlled by emission limits condition' and any all relevant process requirements set out in Tables S1.1 and S1.2.

The burning of any wastes, either in the open, inside buildings or in any form of incinerator is not permitted.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.
