

Browns Group Ltd.
Former Morlais Colliery Site.
Spillage Plan

Possible pollution may result from accidental leaks or spillage from plant or vehicles as no liquid waste is imported into the facility

Measures to mitigate against such accidental spillages likely to cause pollution are shown below –

Steps to be taken on observing a spillage

- Site manager notified.
 - All potential run off routes are locked using sandbags stored on site.
 - The area surrounding the spillage is isolated by application of absorbent granules or clean sand stored on site.
 - Sufficient absorbent granules applied until all polluting liquid has been absorbed.
 - Contaminated granules / sand will be loaded into a suitable sealed container and transported to a suitably permitted disposal facility.
 - Local Natural Resources Wales office notified and a full review of the cause and action taken reviewed.
 - Full report of all circumstances and details prepared and filed.
-
