### Introductory note

#### **This introductory note does not form a part of the permit**

The main features of the permit are as follows.

This permit is for an end-of-life vehicle and metal recycling facility which permits the depollution of waste motor vehicles and sorting, separation, grading, shearing, baling, compacting, granulating of cables and cutting using hand-held equipment of wastes for recovery only.

The total amount of waste that can be accepted onto the site is 5,000 tonnes per year.

This permit does not allow any point source emission into surface waters or groundwater except:

- clean surface water from roofs or from areas of the site that are not being used in connection with storing and/or treating waste, and
- integral discharge(s) from the permitted activity to surface water at permitted locations. These discharges are controlled through the emission of substances not controlled by emission limits condition and the requirements set out in table S1.1.

The burning of any wastes, either in the open, inside buildings or in any form of incinerator is not permitted.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.
