

**Notice of request for more information**

Environmental Permitting (England and  
Wales) Regulations 2016

## Notice requiring further information

**To:** Company Secretary  
Gwynedd Skip And Plant Hire Ltd  
Lon Hen Felin  
Cibyn Industrial Estate  
Caernarfon  
Gwynedd  
LL55 2BD

**Application reference:** PAN-001317

**Permit reference:** EPR/CB3237AP/V002

Natural Resources Wales, in exercise of its powers under paragraph 4 of Part 1 of Schedule 5 of the above Regulations, requires you to provide the information detailed in the attached schedule. The information is required in order to determine your application for a permit, duly made 31/03/2017.

The information requested should be sent to  
[louise.bailey@cyfoethnaturiolcymru.gov.uk](mailto:louise.bailey@cyfoethnaturiolcymru.gov.uk) by **05 May 2017**.

## Schedule

### **A. Production of waste derived fuels**

Refuse derived fuels (RDF) is waste that has been produced to a specific standard required by the end user. This includes technical specifications such as the calorific value, the moisture content, the form and quantity of the RDF. From the information within this application it does not seem that you are making RDF, but are baling residual wastes to create a waste derived fuel, and we shall use this term rather than RDF to describe this.

#### **Questions:**

1. Where on site is the waste derived fuels being made?
2. Are the waste derived fuels being wrapped or just baled? These are separate treatments
3. What waste codes/types will the waste derived fuels contain?

Please note: We have had pest issues at other permitted sites that produce and/or store waste derived fuels. Depending on your answers to the above questions we may require a dedicated Pests Management Plan at a later date.

### **B. WEEE**

4. Do you intend to carry out any treatment of WEEE on site? If yes, please state what treatment, and where this will be carried out.

### **C. Site infrastructure**

Sections 7.5.2 and 8.1.2 of your Technical Standards states the outside yard area as "impermeable hardstanding / concrete hardstanding".

We consider hardstanding to be permeable. The default wording we use within our permits for hazardous and non-hazardous waste is as follows: *"All hazardous and non-hazardous waste must be stored and treated on an impermeable surface with sealed drainage"*.

#### **Question:**

5. Please confirm if the yard area is either:
  - a. an impermeable surface with sealed drainage; or
  - b. a permeable surface where water can freely drain though

### **D. Storage of wastes**

Your site plan and Technical Standards document (section 6.5) detail the storage locations and methods for several wastes, however there are some higher risk wastes that are not detailed including (but not limited to) tyres, WEEE, gas in pressurised containers, batteries, biodegradable kitchen and canteen waste.

#### **Question:**

6. Where and how will these wastes be stored?

### **E. Risk Assessment and Odour Management Plan**

The odour section of your risk assessment does not meet our [H4 Odour Management](#) guidance for an Odour Management Plan. It should identify:

- Source materials (including specific waste types)
- Releases
- Impacts
- General measures
- Monitoring
- Process
- Emissions
- Contingency control measures
- Incidents and emergencies

See Appendix 4 of the [Environment Agency's H4 guidance](#) for further information

### **Question**

7. Please submit a dedicated Odour Management Plan that covers the above points

Please note: your Fire Risk Assessment & Prevention Plan has not yet been assessed pending the answers to the above questions. If you feel that any of your answers would change the contents of the Fire Risk Assessment & Prevention Plan, then please amend it where relevant.
