Permit number EPR/YP3698FQ

Introductory note

This introductory note does not form a part of the permit

The main features of the permit are as follows.

This is a Tier 3 bespoke permit that comprises of the following activities:

- a hazardous and non-hazardous waste transfer station facility with treatment and asbestos storage and;
- an inert and excavation waste processing facility.

The maximum quantity of waste accepted and processed on site in total shall not exceed 45,000 tonnes per year (consisting of no more than 20,000 tonnes of non-hazardous waste, 5000 tonnes of hazardous waste and 20,000 tonnes of inert waste).

Waste transfer station with treatment and asbestos storage

The waste transfer station will accept non-hazardous and hazardous wastes. Black bag waste may be accepted at site. There will be no treatment of black bag waste other than bulking up for onward transport for disposal. There will be no treatment of hazardous wastes other than bulking up for onward transport. Some hazardous waste (fluorescent tubes) will be stored inside a building on an impermeable surface with sealed drainage prior to onward transport for recovery purposes. Asbestos waste will be stored outside in secure, lockable containers on impermeable surface with sealed drainage.

Treatment of non-hazardous waste shall be carried out within a building on impermeable surface with sealed drainage. After treatment non-hazardous waste will be stored outside on an impermeable surface or hard standing. Non-hazardous waste stored on hard standing shall contain segregated waste only in sealed, covered containers. Black bag waste shall be stored inside a building on impermeable surface with sealed drainage.

Treatment of non-hazardous waste includes: mechanical and manual sorting, separation and segregation, screening, shredding, bailing, crushing and compaction.

The maximum quantity of asbestos waste received at the site shall not exceed 50 tonnes per day. The maximum quantity of hazardous waste stored at the site for recovery or disposal shall not exceed 50 tonnes.

Inert and excavation waste processing facility

All storage and treatment of inert waste will take place on hard standing or on impermeable surface with sealed drainage. No hazardous waste is to be accepted for storage or treatment as part of the inert processing activity.

Treatment will include: mechanical and manual sorting, separation and segregation, screening, blending and crushing.

Relevant storage and treatment capacity thresholds have been included in the permit to reflect the legal waste facility operational limits; above which, the site would be operating as an Industrial Emissions Directive installation. (See Table S1.1 for relevant limits.)

This permit does not allow any point source emission into surface waters or groundwater except:

- clean, rainfall dependant drainage from areas of the site not used in connection with the storage and/or treatment of waste, and
- integral discharge(s) from the permitted activity (outside areas of the site used in connection with the storage and/or treatment of waste) in accordance with the limits set out in Table S1.1.

There are to be no emissions to surface and/or groundwater from the buildings on site.

All emissions from the activity which are not controlled via actual emission limits, are controlled through the 'emission of substances not controlled by emission limits condition' and any all relevant process requirements set out in Tables S1.1 and S1.2.

The burning of any wastes, either in the open, inside buildings or in any form of incinerator is not permitted.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.
