## **Non-Technical Summary of the activities at Llanwern East Waste Management Site**

Cuddy Group have a contract with Tata Steel to restore the Llanwern East Waste Management Site (LEWMS) at the Llanwern Steelworks in Newport. The main requirement of this contract is to place a one metre thickness of suitable capping soil onto the entire site, this gives a requirement of 400,000 tonnes of capping soil to be imported for the project.

As the site is located within 500m of the Gwent Levels SSSI a Bespoke Environmental Permit is being applied for to allow the Treatment of waste and the permanent deposit of waste for Recovery.

The project is being overseen by a dedicated CQA Engineer and Tata Steel to ensure the works are being completed to a satisfactory standard and the specification is being met.
